

CUT-DEFINER+ Professional clipper

◀ FX872E

The lightweight BaBylissPRO® **CUT-DEFINER+** FX872E is a professional hair clipper with stainless steel blades that delivers dramatically different cutting performance while a direct drive motor ensures a smoother higher power operation.

BaBylissPRO® professional tools use state-of-the-art materials to achieve meticulous precision and effortless cutting performance; and the **CUT-DEFINER+** FX872E is no exception. The 45 mm stainless steel blade can be customized with a five position fine-tuning thumb wheel (from 0.6 mm to 3.0 mm) and 8 comb guides (varying from 3 mm to 25 mm).

The lightweight design and stylish easy-grip housing provide extra comfort and maximum control.

Thanks to the Lithium-ion battery, the **CUT-DEFINER+** FX872E gets fully charged in only 3 hours and delivers up to 160 minutes of continuous cordless operation without recharge.

The Lithium-ion battery has the advantage of being lighter than a traditional battery. It charges more quickly and has a greater

autonomy. Moreover, it doesn't discharge when it hasn't been used for prolonged periods and does not have a memory effect (the memory effect is a phenomenon that affects the performance and the life of other types of batteries when they are recharged before being fully discharged).

The clipper features an on/off tact switch for effortless operation and a locking function for safe transportation.

The LCD screen displays in real time the battery life, the selected cutting height; a pictogram will also indicate if the locking function is on.
