Features

- Direct operated directional solenoid valve
- Porting pattern according to DIN 24 340 form A, ISO 4401 and CETOP-RP 121 H
- Wet pin DC or AC solenoids with detachable coil
- Pressure-tight chamber needs not to be opened for a coil change

Function and configuration

WE10...3XJ...valves are solenoid operated directional spool valves. They control the start, stop and direction of flow. The directional control valves consist of valve body(1), one or two solenoids (2), the control spool (3), and one or two return springs (4).

In the de-energized condition the control spool (3) is held in the neutral or initial position by means of return springs (4) (except for pulse spools). The control spool (3) is actuated via wet pin solenoids(2).

To ensure proper operation, the pressure chamber of the solenoid must be filled with oil.

The control spool(3) is moved to the expected position by solenoid(2) and pushing rod(5), and this gives free-flow from P to A and B to T or P to B and A to T.

When solenoid (2) is de-energized, the control spool (3) is returned to its neutral position by means of the return springs (4). The solenoids may also control the control spool (3) by an optional override button(6) under the de-energized condition.

Type 4WE10.. 3XJ/OF...
(Impulse spool)

Making capacity		VA	-	550
Duty			Continuous working	
Switching time to ISO 6403	ON	ms	45 to 60	15 to 25
	OFF	ms	20 to 30	20 to 30
Switched frequency		times/h	to 15000	to 7200
Type of protection to DIN 40050			IP65(Z4,Z5L plug), IP67 (K7 Deutsch)	
Max. coils temperature		°C	+150	+180

Performance limits

The performance limits shown are valid when the valve is used with two directions of flow.

Due to the flow forces occurring within the valves, the permissible switching performance limits can be significantly lower with only one direction of flow! (For these applications, please consult us.) The performance limit was determined with the solenoids at their operating temperature, 15% under voltage and with no pre-loading of the tank.
