

LA7311

VCR-Use PAL/SECAM Discriminator S-VHS Discriminator

Overview

The LA7311 is a PAL/SECAM discriminator and S-VHS discriminator IC. When used as PAL/SECAM discriminator, the LA7311 is highly resistant to noise and is capable of providing high sensitive discrimination, because it uses the FM demodulation, peak detection method. Further, the LA7311 uses very few external parts, making the space-saving and low-cost discrimination block available, because it requires neither ceramic filter nor resonance coil. When used as S-VHS discriminator, the LA7311 is also capable of providing high sensitive discrimination.

Features

- Highly resistant to noise and burst input level variations and capable of providing high sensitive discrimination.
- Fewer external parts required (Neither ceramic filter nor resonance coil required).
- On-chip display LED drivers.
- The polarity of burst gate pulse may be either positive or negative.

Specifications

Maximum Ratings at $T_a = 25^\circ\text{C}$

Parameter	Symbol	Conditions	Ratings	Unit
Maximum supply voltage	$V_{CC \text{ max}}$		7.0	V
Allowable power dissipation	$P_d \text{ max}$		130	mW
Operating temperature	T_{opr}		-10 to +70	$^\circ\text{C}$
Storage temperature	T_{stg}		-40 to +125	$^\circ\text{C}$

Operating Conditions at $T_a = 25^\circ\text{C}$

Parameter	Symbol	Conditions	Ratings	Unit
Recommended supply voltage	V_{CC}		5.0	V
Operating voltage range	$V_{CC \text{ op}}$		4.5 to 6.0	V

■ Any and all SANYO products described or contained herein do not have specifications that can handle applications that require extremely high levels of reliability, such as life-support systems, aircraft's control systems, or other applications whose failure can be reasonably expected to result in serious physical and/or material damage. Consult with your SANYO representative nearest you before using any SANYO products described or contained herein in such applications.

■ SANYO assumes no responsibility for equipment failures that result from using products at values that exceed, even momentarily, rated values (such as maximum ratings, operating condition ranges, or other parameters) listed in products specifications of any and all SANYO products described or contained herein.

Equivalent Circuit Block Diagram and Sample Application Circuit (PAL/SECAM Discrimination)

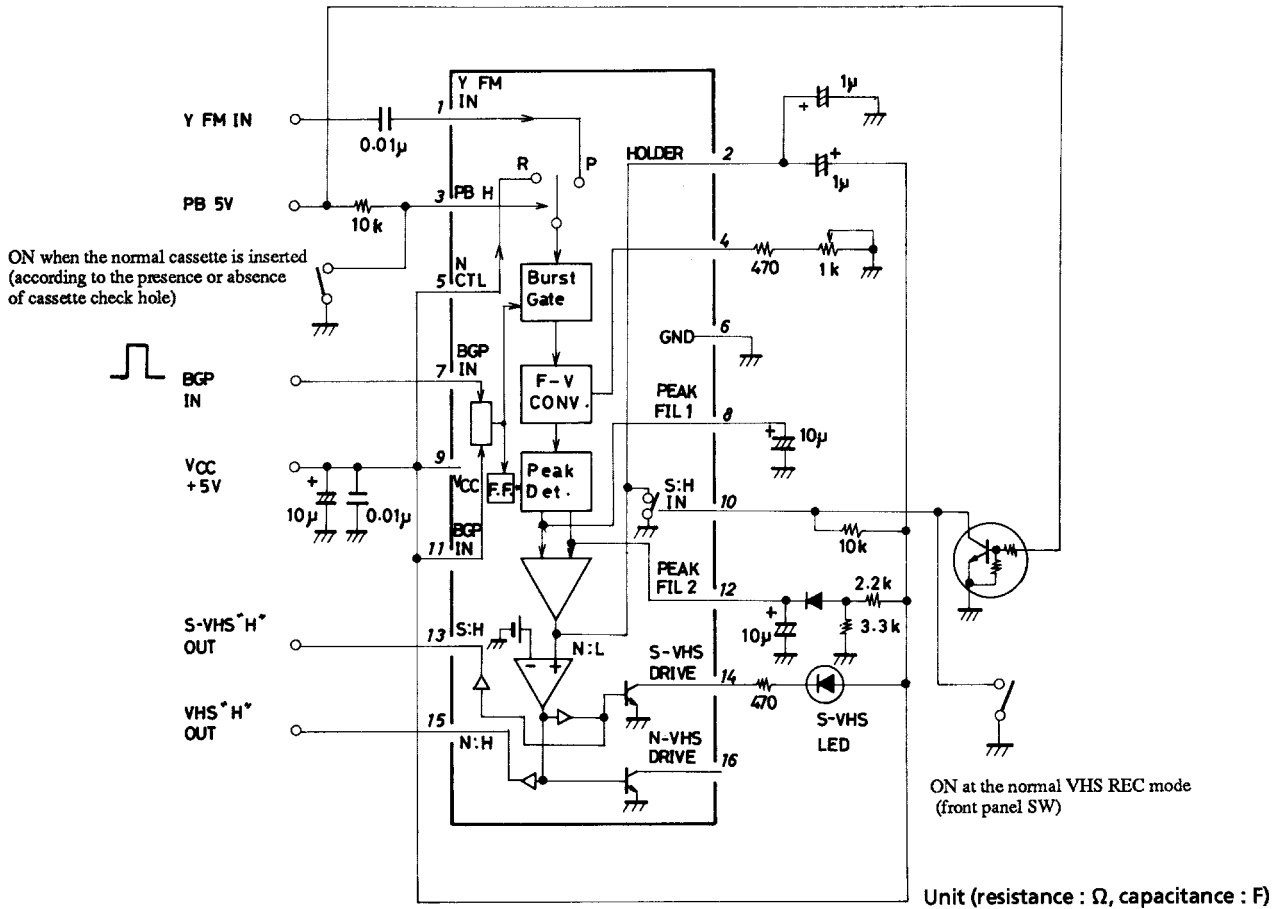

Note 1 : When the BGP is positive, apply an input to pin 7 and connect pin 11 to V_{CC}.

Note 2 : When pin 10 is not in use, bring pin 10 to the open state or connect to GND.

Sample S-VHS Discriminator

Adjustment method : Adjust the VR (from VR center position) connected to pin 4 so that the DC voltage on pin 8 becomes 2.0V when the FM-Y signal at the (normal) VHS REC tape PB mode is input.

Note 1 : When the BGP is negative, apply an input to pin 11 and connect pin 7 to GND.

Note 2 : Pin 5 may be connected to GND.
