Functional Description

The ISO-DA8/16 is a bus isolated 14-bit D/A card for PC/AT compatible computers. The optical isolation of the ISO-DA8/16 can operate with up to 2500Vrms of common-mode. The ISO-DA8/16 offers 8/16 channel double-buffered analog outputs. The output range can be configured in different ranges: $\pm 10V$, $\pm 5V$, 0~10V, 0~5V voltage output or 4 to 20 mA or 0 to 20 mA sinkcurrent.

The innovative design improve several drawbacks of the conventional isolated D/A card. For example :

1. Jumperless and trimless
2. The power-on value of analog output can be pre-defined by the user and stored in the on-board EEPROM
3. The calibration is performed under software control, thus eliminating manual trim-pot adjustments. The calibration data is stored in EEPROM. Easy recalibration ensures the accuracy of the board
4. Every channel can be selected as voltage or current output
5. High channel count output can be implemented in half size.

Applications

- Programmable voltage source
- Programmable current sink
- Harsh environment operation
- Process control
