GEEKBOARDS MACROPAD²

2022

USER'S GUIDE

DESIGNED BY
GEEKBOARDS
IN MOSCOW
Assembled in China 2022

Features and characteristics

8 keys
with Hot Swap

4 layers
16 macros

Win, MacOS, Linux
friendly

Keymap changer through
VIA configurator

Open-source
QMK firmware

RGB Backlit keys
+ effects

USB TYPE-C

Aluminum
case

Keycaps
8 pcs

Switches
8 pcs

Aluminum case
1 pcs

Printed circuit board
(PCB) 1 pcs

Cover
1 pcs

M2 screws
8 pcs

Silicone feet
4 pcs

USB cable
1 pcs

Puller
1 pcst

Screwdriver
1 pcs

Keyboard assembly and preparing for use

1.

Install the PCB into the case using 4 screws

2.

Install the acrylic cover using 4 screws

3.

Put silicon feet into notches

4.

Put switches inside sockets

5.

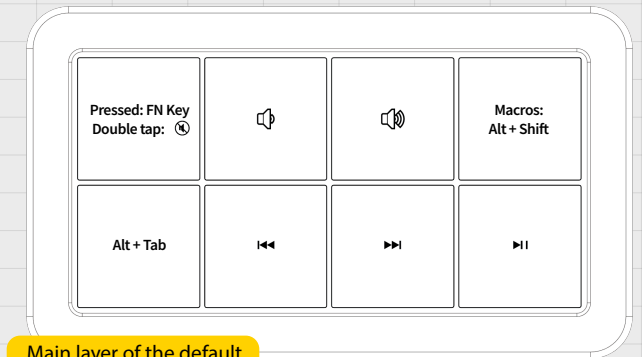

Put keycaps on switch stems

6.

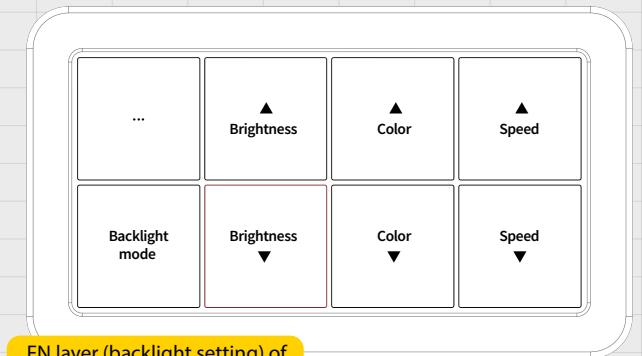

Connect the device to the computer using the USB cable

Default keymap

Main layer of the default keymap

FN layer (backlight setting) of the default keymap

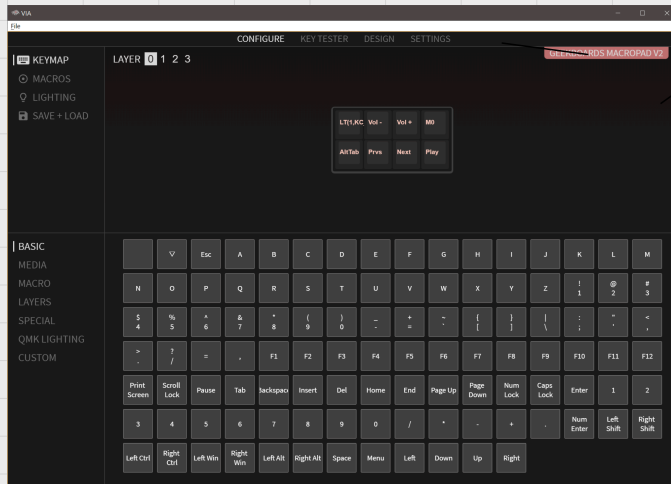

Configurator

Download and install the app for the VIA configurator:

Download

This app allows you to assign different commands to each macropad switch, manage layers and macros, customize backlight mode, color and brightness, save configurations to a file and restore them from this file.

Once the application is launched and Macropad is connected to the computer, the settings dialog opens.

Example

Macropad tuning for streamers

Firmware update Win + Mac

- 1 Download firmware at [the link](#)
- 2 Download and run the application [QMK Toolbox](#)
- 3 Choose the downloaded firmware in the “Local file” section
- 4 Disconnect Macropad from the computer
- 5 While holding the top left button, connect the Macropad to the computer. Continue to hold the button for 3 more seconds, then release. Macropad backlight should not be on. If the backlight is on, repeat steps 4 and 5
- 6 Make sure there is the following text box in QMK Toolbox section:
***** STM32 device connected: STMicroelectronics STM32 BOOTLOADER**
- 7 Press **FLASH** and wait for the end of the firmware update.

Firmware update Linux

- 1 Download [Docker CE](#)
- 2 Download [Git](#)
- 3 Open a terminal and do the following:

```
git clone --recurse-submodules https://github.com/geekboards/qmk_firmware.git  
cd qmk_firmware/  
sudo util/docker_build.sh geekboards/macropad_v2:via:flash
```

IT DOWNLOADS THE LAST VERSION OF QMK, SETS UP ENVIRONMENT, COMPILES AND FLASHES UP-TO-DATE FIRMWARE VERSION
- 5 Disconnect Macropad from the computer
- 6 While holding the top left button, connect the Macropad to the computer. Continue to hold the button for 3 more seconds, then release. Macropad backlight should not be on. If the backlight is on, repeat steps 4 and 5
- 7 Wait for the end of firmware update

Macropad care. To clean up the Macropad:

- Disconnect the Macropad from the power supply and take out the USB cable
- Remove the keycaps with a puller, straight up, so as not to damage the macropad
- Remove switches with puller
- Flip the Macropad and lightly pat its bottom and shake out all the dirt
- Wipe off any dirt and dust from the keycaps with a slightly damp, clean microfiber cloth. Then wipe dry
- Dust and dirt from the case and board can be removed with a microfiber cloth moistened with an alcohol-containing liquid
- Make sure the case and keycaps are completely dry before assembly
- Treat the Macropad cable with care. Do not bend the cable, do not pull on it, do not disconnect or connect the cable unnecessarily, in order to avoid rapid wear off of the USB port

Factory reset

- Disconnect the Macropad from the computer
- While holding the top left button, connect the Macropad to the computer. Continue to hold the button for 3 more seconds, then release. Macropad backlight should not be on
- Turn off the Macropad and then turn it back on, don't hold any buttons
- Macropad is reset to its factory settings
