## 1. Product description

VRPWD90 series transmitters are 26GHz high-frequency radar level transmitters with analog signals 4-20mA, the Max. measuring distance is up to 70m. The antenna has been further optimized, and the latest update microprocessor can make higher speed signals analysis, which enables the level transmitters can be used in very complicated measuring applications such as reaction kettles or solid bunkers.

- Working principle

The radar level transmitter antenna emits narrower micro wave pulses which are transmitted via the antenna. The micro waves are reflected back after touching the surface of a medium, and then antenna system receives them and transmits them into the electrical circuit where they are automatically turned into the level signals.

A. Setting measuring range

B. Low level adjustment

C. High level adjustment

D. Dead zone

Measuring reference is the bottom surface of threads or the sealing surface of a flange.

Note: when using the radar level transmitter, must keep the highest level of medium out of the dead zone (see area D shown in the drawing).

- Features

The radar level transmitter adapts the emitting frequency of 26GHz,

丹东德泽科技有限公司

DANDONG VIRTUE RIVER TECHNOLOGY CO., LTD

therefore it has the following features:

- Noncontact measuring, no abrasion, no contamination
- Easy installation due to small size of antenna
- Shorter wave length, which can get better reflection for the inclined solid surface.
- Smaller measuring dead zone, which can get better measuring results for small tanks.
- Smaller beam angle, which makes the energy be more concentrated, enhancing the wave reflection ability which can keep signals more powerful to avoid obstacles.
- Almost unaffected by corrosion and foams.
- Almost unaffected by changes of steam, changes of temperature and pressure in the air.
- Even in heavy dust environment, the transmitter can also receive the real level return wave.
- High SNR, which can make the instrument get better performance.
- Frequency 26GHz is the best option for measuring solid and low dielectric constant medium.

## 2. Instrument introduction

### VRPWD91

- Features: Corrosion resistant and wholly sealed radar antenna, short dead zone and easy installation. It's mainly used for measurement of strong corrosive liquids such as hydrochloric acid, nitric acid, sulfuric acid, alkali liquids, etc, in industries of chemical, metallurgy, refinery, food processing, etc.
- Measuring range (maximum): 20m (depends on dielectric constant of different medium and the concrete working conditions)

丹东德泽科技有限公司

DANDONG VIRTUE RIVER TECHNOLOGY CO., LTD

- Process connection: Thread, flange
- Medium temperature: -60 °C to +120 °C
- Process pressure: -0.1 to +0.3MPa
- Accuracy: ±3mm
- Repeatability: ±1mm
- Frequency range: 26GHz
- Explosion proof: Ex ia IIC T6 Ga
- Enclosure protection grade: IP67
- Signal output: 4-20mA/ HART (2-wire/ 4-wire) , RS485/ Modbus
- Air purging and liquid rinsing: on request
- For those with communication of RS485/MODBUS, backlight is available on request

### Dimensions of VRPWRD91

## Installation of VRPWD91

Installation with flange

Installation with thread

The minimum distance between the symmetrical central line of the transmitter and the inner tank wall should be at least 300mm

## VRPWD92

- Features: Horn antenna, small beam angle, strong wave focusing, high accuracy. It's mainly used for measurement of light corrosive liquids with high temperature and pressure in industries of petroleum, chemical, metallurgy and water treatment, etc.
- Measuring range (maximum): 30m (depends on dielectric constant of different medium and the concrete working conditions)
- Process connection: Thread, flange
- Medium temperature: -60 ~ +250°C
- Process pressure: -0.1 ~ +4.0 MPa
- Accuracy: ±2mm
- Repeatability: ±1mm
- Frequency range: 26GHz
- Enclosure protection grade: IP67
- Explosion proof: Ex ia IIC T6 Ga

- Signal output: 4-20mA/ HART (2-wire/ 4-wire), RS485/Modbus
- For those with communication of RS485/MODBUS, backlight is available on request

## Dimensions of VRPWRD92

Horn model selection	
Horn diameter D	Horn height H (mm)
Ø46	140
Ø76	227
Ø96	288
Ø121	620

## Installation of VRPWRD92

The minimum distance between the symmetrical central line of the transmitter and the inner tank wall should be at least 300mm

## VRPWD92H

- Features: High accuracy, strong strength of anti-interference, not affected by temperature, humidity, wind force and direction, easy installation and calibration, low power consumption.
- Application: Suitable for water level measurement and monitoring of lakes, reservoirs, rivers, open channels, and tidal level of oceans.
- Measuring range (maximum): 30m
- Process connection material: PP/ SS
- Medium temperature: -40°C~+100°C
- Process pressure: ATM
- Antenna material: SS
- Accuracy: ±3mm
- Frequency range: 26GHz
- Signal output: RS485/ Modbus
- Power supply: 6 to 24V DC
- Display: optional
- Backlight is available on request

## VRPWD93

- Application: Solid powder, particles, bulks, with heavy dust, easy crystallization and condensation, etc.
- Measuring range (maximum): 70m (depends on dielectric constant of different medium and the concrete working conditions)
- Process connection: Thread, flange or flange with universal joint, for antenna direction adjustment.
- Medium temperature: -60°C~+250°C
- Process pressure: ATM, or, -0.1 - +0.3 MPa
- Accuracy: ±15mm
- Repeatability: ±2mm
- Frequency range: 26GHz
- Explosion proof: Ex ia IIC T6 Ga
- Enclosure protection grade: IP67
- Signal output: 4-20mA/ HART (2-wire/ 4-wire), RS485/Modbus

丹东德泽科技有限公司

DANDONG VIRTUE RIVER TECHNOLOGY CO., LTD

- With universal joint flange, the antenna can aim at the solid level surface exactly to get more accurate measured value.
- For those with communication of RS485/MODBUS, backlight is available on request

## Dimensions of VRPWRD93

Horn model selection	
Horn diameter D	Horn height H (mm)
Ø76	227
Ø96	288
Ø121	620

## Installation of VRPWRD93

Mounting position: keep the outskirt of the antenna at least 300mm away from the inner wall of a tank

## VRPWD93H

Features: High accuracy, strong strength of anti-interference, not affected by temperature, humidity and wind force and direction, easy installation and calibration, low power consumption.

- Application: Suitable for water level measurement and monitoring of rivers, reservoirs, lakes, open channels, and tidal level of oceans.
- Measuring range (maximum): 70m (depends on dielectric constant of different medium and the concrete working conditions)
- Process connection material: PP/ SS
- Medium temperature: -40°C ~ +100°C
- Process pressure: ATM
- Antenna material: SS
- Accuracy: ±10mm
- Frequency range: 26GHz
- Signal output: RS485/ Modbus
- Power supply: 6 to 24V DC
- Display: optional
- Backlight is available on request

## VRPWD94

- Application: Solid level for process tanks with heavy dust or ash, easy crystallization and condensation.etc.
- Measuring range (Maximum): 70m (depends on dielectric constant of different medium and the concrete working conditions)
- Process connection: Thread, flange
- Medium temperature: -60°C ~ +250°C
- Process pressure: ATM, or -0.1 - +0.3MPa
- Accuracy: ±15mm
- Repeatability: ±2mm
- Frequency range: 26GHz
- Explosion proof: Ex ia IIC T6 Ga

- Enclosure protection grade: IP67
- Signal output: 4-20mA/ HART (2-wire/ 4-wire), RS485/ Modbus
- With universal joint flange, the antenna can aim at the solid level surface exactly to get more accurate measured value
- For those with communication of RS485/MODBUS, backlight is available on request

### Dimension of VRPWRD94

## Installation of VRPWRD94

The minimum distance between the outskirt of the parabolic antenna and the inner tank wall should be at least 300mm

## VRPWRD95

- Application: liquid, solid particles and bulks
- Measuring range (Maximum): 35m (depends on dielectric constant of different medium and the concrete working conditions)
- Process connection: Thread, flange
- Medium temperature: -60°C ~ +250°C
- Process pressure: -0.1 – +4.0 MPa, or ATM
- Accuracy: ±3mm (for liquids); +/-10mm for solids
- Repeatability: ±1mm
- Frequency range: 26GHz

<http://www.v-river.com>, Tel.: +86 – 415 – 6199871, E-mail: [davidsong@v-river.com](mailto:davidsong@v-river.com)

丹东德泽科技有限公司

DANDONG VIRTUE RIVER TECHNOLOGY CO., LTD

- Explosion proof: Ex ia IIC T6 Ga
- Enclosure protection grade: IP67
- Signal output: 4-20mA/ HART (2-wire/ 4-wire), RS485/ Modbus
- For those with communication of RS485/MODBUS, backlight is available on request

### Dimension of VRPWRD95

Horn model selection	
Horn diameter D	Horn height H (mm)
Ø76	227
Ø96	288
Ø121	620

### Installation of VRPWRD95

The minimum distance between the symmetrical central line of the transmitter and the inner tank wall should be at least 300mm

### VRPWD95 (F)

- Feature: Sealed antenna with anti-corrosion cover
- Antenna size: 62mm, corresponding to flange sizes, DN80, DN100; 96mm, corresponding to flange sizes, DN150, DN200
- Application: be suitable for strong acids, alkalis, or other strongly corrosive liquids, or liquids with heavy steam, etc.
- Measuring range: 35m
- Process connection: Flange
- Working temperature range: -60 to +150°C
- Process pressure: -0.1 to 1.0MPa
- Accuracy: +/-3mm
- Working frequency: 26GHz
- Explosion proof: Ex ia IIC T6 Ga
- Enclosure protection grade: IP67
- Signal output: 4-20mA/ HART (2-wire/ 4 wire) or RS485/MODBUS
- For those with communication of RS485/MODBUS, backlight is available.

### VRPWD95 (FF)

- Feature: Whole sealed structure
- Antenna size: 62mm, corresponding to flange sizes, DN80, DN100; 96mm, corresponding to flange sizes, DN150, DN200
- Application: be suitable for strongly corrosive liquids tanks with corrosive environment
- Measuring range: 35m
- Process connection: Flange
- Working temperature range: -60 to +150°C
- Process pressure: -0.1 to 1.0MPa
- Accuracy: +/-3mm
- Working frequency: 26GHz

- Explosion proof: Ex ia IIC T6 Ga
- Enclosure protection grade: IP67
- Signal output: 4-20mA/ HART (2-wire/ 4-wire) or RS485/MODBUS

## VRPWRD96

- Application: sanitary liquid storage containers, heavy corrosive container
- Measuring range (Maximum): 20m (depends on dielectric constant of different medium and the concrete working conditions)
- Process connection: Flange
- Medium temperature: -60 ~ +150°C
- Process pressure: -0.1 - +0.3MPa, or, ATM
- Accuracy: ±2mm
- Repeatability: ±1mm
- Frequency range: 26GHz
- Explosion proof: Ex ia IIC T6 Ga
- Enclosure protection grade: IP67
- Signal output: 4-20mA/ HART (2-wire/ 4-wire), RS485/ Modbus
- Those with communication of RS485/MODBUS, backlight is available

## Dimension of VRPWRD96

Horn model selection		
Horn diameter D	Horn height H (mm)	
Ø76	227	Ø99
Ø96	288	Ø132
Ø121	620	Ø156

## Installation of VRPWD96

D	H
$\varnothing 50\text{mm}$	100mm
$\varnothing 80\text{mm}$	150mm
$\varnothing 100\text{mm}$	200mm

The minimum distance between the symmetrical central line of the transmitter and the inner tank wall should be at least 300mm

### 3. Installation

- Preparation before installation

Please note the below items to make sure the proper installation of the instrument:

Please leave enough space for the installation.

Please keep the installation position away from where there is strong vibration.

In order to make the fast, easy and safe installation, please follow the installation instructions below!

- Installation instruction (refer to the figure upper right): the instrument should be mounted at 1/6 of the tank diameter and the minimum distance between the symmetrical central line of the transmitter and the inner tank wall should be more than 300mm

Note: ①: Reference surface

②: Symmetrical central line of the tank

- Tapered tank: When the top surface of a tank is flat, the instrument can be mounted in the middle of the top, which can ensure the measurement to the bottom of the tank.

- Tank with pile: the antenna should focus on the material surface vertically. When the solid level surface is not flat and horizontal, and repose angle is big, a flange with a universal joint must be used, with which the angle of the antenna can be adjusted and focus on the material surface as much as possible.

- Typical installation error
- Instrument cannot be mounted above feeding inlet. Keep the installation place away from sunshine or rain for the outdoor installation.

① : Correct

② : Wrong

- The instrument cannot be mounted at the middle of a tank with arch top. If so, it will have indirect echoes and be affected by multiple echoes. Multiple echoes amplitudes might be stronger than those of the real return signals. The arch top can cause multiple echoes. Therefore, the instrument cannot be mounted at the center of the tank top.

① : Correct

② : Wrong

- A reflector is needed when there is an obstacle which may interrupt the measurement in the tank.

① : Correct

② : Wrong

- Measurement with wave guide pipe

- When there is an obstacle in the area of the signal beam, e.g. a ladder, a limit switch, a heating device, a rack or a blender, etc, it will interrupt the measurement and lead to wrong measuring result. In this case, a wave guide pipe is needed for the measurement.

- Installation by a wave guide pipe ( a wave guide pipe or a bypass pipe) can avoid being affected by any obstacle, foams or liquid waves.

丹东德泽科技有限公司

DANDONG VIRTUE RIVER TECHNOLOGY CO., LTD

Note:

The isobaric hole diameter is (5~10) mm.

Min. diameter of a wave guide pipe is at least 50mm with smooth inner wall.

With a wave guide pipe, instruments can only measure a liquid with good liquidity. Measurement with a wave guide pipe is not suitable for viscous liquids.

- Height of the extension pipe (or, mounting pipe, or nozzle): the antenna must be extended into the tank at least 10mm. (please refer to the pictures below)

## 4. Electric Connection

- **Power supply**

### (4~20) mA/ HART (2-wire)

Power supply shares one 2-wire cable with the output signal. Regarding to the actual power supply voltage, see the technical data. A safety barrier must be installed between the power supply and the transmitter for the intrinsically safe type.

### (4~20) mA/ HART (4-wire)

Power supply and signal current are separate; each has one 2-wire cable. See the technical data for the actual power supply voltage.

### RS485/Modbus

Power supply and the Modbus signal wire are separate; each has one 2-wire shielded cable. See the technical data for the actual power supply voltage.

- **Cable**

General introduction

Cable OD: 5 ~ 9mm (M20 x 1.5)

3.5mm ~ 8.7mm (½NPT)

2-wire or 4-wire cables are used for the electric connection.

Due to the electromagnetic interference from the motor drive device, power supply wires or remission devices, the transmitter wires need to be the shielded cable.

### (4~20) mA/ HART (2-wire)

Normal 2-wire cable can be used for the power supply.

### (4~20) mA/ HART (4-wire)

Cables with ground wire for the power supply.

### RS485/ Modbus

丹东德泽科技有限公司

DANDONG VIRTUE RIVER TECHNOLOGY CO., LTD

Power supply cables should be shielded cable.

Shielded wire and ground wire of the cable

Ideally the two ends of shielded wire should be connected to the ground. But note that: there will be the grounding compensation current passing through the shielded wire. A grounding electric capacity (e.g. 1μF: 1500V) can be connected to one end (e.g. switch cabinet) when the both ends are connected to the ground. Try to use a resistance with much possible lower value to be connected to the ground. (Note: if the transmitter is used in the Explosion proof area, it is not allowed to connect the both ends to the ground due to the potential output.)

- **Wiring**

- 24V, 2-wire:

- 24V, 4-wire:

- 24V, RS485/ Modbus:

- **Safety instruction**

All the electric connection must be done under the situation of power being off. Please follow the instructions of the manual.

Please follow the requirements of the local regulation on electrical connection.

Please follow the local regulations on human health and safety. All the electrical operation must be done by the qualified professional technicians.

Please check the nameplate of a transmitter to ensure it can meet your technical requirements. Please make sure the power supply is in accordance with the value printed on the name plate.

- **Enclosure protection grade**

This instrument is in fully conformity with the requirements of the enclosure protection grade IP67.

Please make sure the waterproof performance of the cable entry seal. See the picture on the right:

How to make sure the installation can meet the requirements of IP67:

Please make sure the cable entry seal is not damaged.

Please make sure the cable is not damaged.

Please make sure the cable meets the requirements of the electrical connection regulations.

Bend the cable down before entering the electrical inlet, which will keep the water away from the housing, see mark ① at the above picture.

Please tighten the cable entry seal, see mark ② at the above picture.

Please tighten the unused cable entry with a seal cap. See mark ③ at the above picture.

## 5. Transmitter calibration

- **Methods of debugging**

There are three debugging methods for VRPWRD90:

- ①: With display/ buttons
- ②: With a PC with a software
- ③: With a HART hand-hold communicator
- **Display/ button:** Debugging can be done with the 4 buttons on the display screen. Menu language is optional. After debugging, the display keeps the normal working condition. The measured values can be clearly read through the glass screen.

Display/button

- ① : LCD display
- ② : Buttons
- ③ : Wiring terminal

- **Debugging with a PC with a software**

Connect a PC with a HART modem

① : RS232 interface or USD interface

② : VRPWRD9X

③ : HART adapter

④ : A resistance of  $250\Omega$

- **HART hand-hold communicator**

VRPWRD9X radars can be calibrated with a HART hand-hold communicator.

① : A HART hand-hold communicator

② VRPWRD9X

③ A resistance of  $250\Omega$

## 6. Structure dimensions (unit: mm)

Housing

Antenna Material	PVDF	Stainless/ PVDF	Stainless/ PVDF	Stainless/ PVDF	Stainless/ PVDF	Stainless/ PVDF

### Housing

Seal material between housing and cover: silicon rubber

Display window material: PC

Ground connection terminal material: Stainless steel

### Weight:

- VRPWRD91 1kg (depends on the process connection)
- VRPWRD92 2kg (depends on the process connection)
- VRPWRD93 6kg (depends on the process connection)
- VRPWRD94 7kg (depends on the process connection)
- VRPWRD95 2kg (depends on the process connection)
- VRPWRD96 3kg (depends on the process connection)

### Power supply:

2-wire Standard type: (16~26) V DC

Intrinsically safe: (21.6~26.4) V DC

Power consumption: max 22.5mA/ 1W

Allowed ripple: <100Hz Uss<1V

(100~100K)Hz Uss<10Mv

丹东德泽科技有限公司

DANDONG VIRTUE RIVER TECHNOLOGY CO., LTD

## Cable parameter

Cable inlet/ plug: 1 M20x1.5 cable entry (cable diameter 5~9mm), one blindness block, M20x1.5  
Wiring terminal: cross section 2.5mm<sup>2</sup>

## Output parameter

Output signal/ communication protocol: (4~20) mA/ HART, RS485/ Modbus  
Resolution: 1.6μA  
Error signal: output current no change, 20.5mA, or 22mA, or 3.9mA  
2-wire, load resistance, see the drawing below:  
Integral time: (0~50) s, adjustable

## Features:

Dead zone: the remote end of an antenna

Max. measuring range: VRPWRD91	20m (liquids)
VRPWRD92	30m (liquids)
VRPWRD93	70m (solids)
VRPWRD94	70m (solids)
VRPWRD95	35m (liquids or solids)
VRPWRD96	20m (liquids)

Note: the actual maximum measuring range finally depends on the dielectric constant and concrete working conditions.

Micro-wave frequency: 26GHz

Communication connection: HART communication protocol/  
Modbus communication protocol;

Measuring interval: approx. 1 second (depends on the parameter setting)

Adjustable time: approx. 1 second (depends on the parameter setting)

丹东德泽科技有限公司

DANDONG VIRTUE RIVER TECHNOLOGY CO., LTD

- Tapered       Flat       Inclined       Arc

#### Installation position:

- Top       Side       Bypass pipe       Wave guide pipe

#### Extension pipe (important information):

Extension pipe height (Length): mm,

Extension pipe diameter: mm

#### Measuring medium:

Medium name:  Liquid  Solid  Mixed

Medium temperature: °C Dielectric constant:

Adhesive:  Yes  No Stirring:  Yes  No

#### Process connection:

Thread:  G1½"  1½" NPT

Flange (DN= )  Flange (ANSI= )

#### Power supply:

24V DC 2-wire  24V DC 4-wire  220V AC  6V DC  12V DC

#### Output:

4-20mA  Hart  RS485/Modbus

#### Display:

- With display and programmer  
 Without display and programmer
