

FLASHFX Professional trimmer

◀ FX59ZE

The precision trimmer **FLASHFX** FX59ZE is slim, lightweight and powerful.

The lithium-polymer battery gives a continuous 75-minute cordless operating time without recharge; this autonomy is reached with a 2-hour quick charge only. Provided with a powerful DC motor, the FX59ZE is efficient, silent, low heat and low vibration.

The T-blade gives an additional 25% more blade than a standard U-blade, so when removing bulk, larger amounts of hair can be taken at a time. The T-blade, is easier to create nice crisp straight lines on the sides of the neck and all around the hairline because the blade is longer. Using the edge of the T-blade circles and intricate designs can be drawn perfectly. It can be set to zero to achieve clear cuts. Thanks to the specially designed adjustment tool, the blades will always be flush with each other for precise, clear results, safely. One side of the tool is designed to set the blade to zero ; the other side is for resetting it for regular use and get back to a cutting height of 0.5 mm.
