## LOW VOLTAGE/POWER NARROW BAND FM IF

### DESCRIPTION

The Contek MC3361BP is designed for use in FM dual conversion communication. It contains a complete narrow band FM demodulation system operable to less than 2.5V supply voltage. This low-power narrow-band FM IF system provides the second converter, second IF, demodulator. Filter Amp and squelch circuitry for communications and scanning receivers.

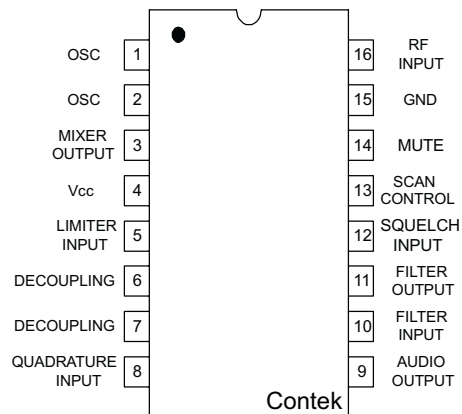

### FEATURES

- \*Low power consumption (4.0mA typ. at Vcc=4.0V)
- \*Excellent input sensitivity (-3dB limiting, 2.0 $\mu$ Vrms typ.)
- \*Minimum number of external components required.
- \*Operating Voltage:2.5~7.0V

### APPLICATIONS

- \*Cordless phone (for home use)
- \*FM dual conversion communications equipment

PARAMETER	SYMBOL	VALUE	UNIT
Max. Supply Voltage	Vcc(max)	10	V
Supply Voltage Range	Vcc	2.5 to 7.0	V
Detector Input voltage	VI(DET)	1.0	Vp-p
RF Input Voltage (Vcc>=4.0V)	VI(RF)	1.0	Vrms
Mute Function	VMUTE	-0.5 ~ + 5.0	Vpeak

## APPLICATION CIRCUIT

In the above typical application, the audio signal is recovered using a conventional quadrature FM detector. The absence of an input signal is indicated by the presence of noise above the desired audio frequencies. This noise band is monitored by an active filter and a detector. A squelch trigger circuit indicates the presence of noise (or a tone) by an output which can be used to control scanning. At the same time, an internal switch is operated which can be used to mute the audio.
