## APPLICATION AND USE

Electric actuators are suitable to drive VFS/VFSF/VFF valve body series in HVAC systems. Two action types are available:

- floating (3-point)
- modulating (see schedule input signal)

The assembly actuator/valve body is done directly and easily without any tool.
The actuator can be adapted automatically to the valve (proportional model).

Electric actuators for VFS/VFF_65/VFSF valve body series

| TYPE | FORCE <br> $\mathbf{N}$ | STROKE <br> $\mathbf{m m}$ | POWER SUPPLY <br> Vac $50 / 60 \mathrm{~Hz}$ | ACTION | POWER CONSUMPTION <br> VA |
| :--- | :---: | :---: | :---: | :---: | :---: |
| SE6M24 | 600 | 16.5 | 24 | modulating <br> $0 \ldots .10 \mathrm{Vdc}$ <br> $4 \ldots 20 \mathrm{~mA}$ | 6.0 |
| SE6F24 | 600 | 16.5 | 24 | $2-, 3-$ point (floating) | 4.0 |
| SE6F24S | 600 | 16.5 | 24 | $2-, 3-$ point (floating) | 4.0 |
| SE6F230 | 600 | 16.5 | $110 \ldots 240$ | $2-, 3-$ point (floating) | 6.0 |
| SE6F230S | 600 | 16.5 | $110 \ldots 240$ | $2-, 3-$ point (floating) | 6.0 |

Accessory:

| ADV1 | adapter for valves Industrietechnik series 2S e 3S |
| :--- | :--- |
| ADV2 | adapter for valves Industrietechnik series 2S- e 3S- |
| ADV3 | adapter for valves Controlli series VMB/VSB |

| ADV4 | adapter for valves Neptronik series GS/GM |
| :--- | :--- |
| ADV5 | adapter for valves SEC (Siebe/Invensys) series VB 7000 |

At the request adapters for valves of other brands.

| UP | Brown |

auxiliary switches for models SE6F24S - SE6F230S

Contact 1-2 closed at the end of stroke Contact 4-5 closed at the end of stoke

Actuator is fitted with manual override by a hexagonal key to move the motor and so the stem.
Actuator is equipped with torque limit device, to power off when actuator reaches the end-strokes. The SE6M24 has an additiona feedback signal output.
A LED indicates the current state of the actuator: adjustment, control, end stroke position, error condition.

SE6M24:

| INPUT SIGNAL $(\mathbf{Y})$ | IMPEDANCE $\left(R_{\text {in }}\right)$ |
| :--- | :---: |
| $\mathbf{0 . . . 1 0 ~ V d c}$ | $\sim 65 \mathrm{kOhm}$ |
| $\mathbf{0 . . . 4 ~ \mathrm { Vdc }}$ | $\sim 65 \mathrm{kOhm}$ |
| $6 . .10 \mathrm{Vdc}$ | $\sim 65 \mathrm{kOhm}$ |
| $2 \ldots . .10 \mathrm{Vdc}$ | $\sim 65 \mathrm{kOhm}$ |
| $4 . .20 \mathrm{~mA}$ | $\sim 500 \mathrm{Ohm}$ |

## TECHNICAL FEATURES

Power supply:

| - SE6M24 | $24 \mathrm{Vac} \pm 10 \% 50 / 60 \mathrm{~Hz}$ |
| :---: | :---: |
| - SE6F24 | $24 \mathrm{Vac} \pm 10 \% 50 / 60 \mathrm{~Hz}$ |
| - SE6F230 | 110... $240 \mathrm{Vac} \pm 10 \% 50 / 60 \mathrm{~Hz}$ |
| Auxiliary switches: | 3(1) A 230 Vac |
| Running time: | 70 sec . |
| Manual override: | by 3 mm hexagonal key |
| Action: | direct / reverse selectable by jump |
| Working conditions: | $0 . .50{ }^{\circ} \mathrm{C}$ |
| Storage temp.: | $-20 . . .70^{\circ} \mathrm{C}$ |
| Humidity range: | $10 . .90$ \% r.h. (without condensing) |
| Connections: | cable section $1 \mathrm{~mm}^{2}$ length 1 m |
| Housing: | transparent in polycarbonate |
| Base: | PA6 V0 |
| Bracket: | PA6 30 GF V0 |
| Max working temp.: | -30/+140 ${ }^{\circ} \mathrm{C}$ (Bracket) |
| Traction breaking |  |
| load: | 1500kg/cm ${ }^{2}$ (Bracket) |
| Protection class: | IP54, class II (SE6F230), |
| Dimensions: | see drawing |
| Weight: | 470 g |

## 

$\bullet^{\bullet}$

STATUS INDICATION BY LEDS

GREEN slowly blinking:
RED SLOWLY blinking:
GREEN FAST blinking: RED FAST blinking: GREEN lighted:

## RED lighted:

self-adjusting in upper position (SE6M24)
self-adjusting in bottom position (SE6M24).
modulating to upper position. modulating to bottom position. motor on upper end stroke or is moving toward upper end stroke (SE6M24). motor on bottom end stroke or is moving toward bottom end stroke (SE6M24).

ORANGE lighted:

ORANGE blinking:
RED and GREEN
blinking:
All LEDS OFF:
Slow blinking:
Fast blinking:
error to move on stroke, the motor tries 3 times to unlock and then 3 times to self-adjust (SE6M24).
permanent error after tries to do the stroke done (SE6M24).
jumpers setting not correct (SE6M24)
control position reached

2 flashing / second
8 flashing / second

## DIRECT / REVERSE ACTION (SE6M24)

On direct action if signal is equal to 0 V , the shaft reaches the up position (way A - AB closed). By applying 10 V signal, the shaft reaches down position (way A - AB opened).
On reverse action, operating mode is reversed.
The servomotor is supplied from factory with direct action with $0 . .10$ Vdc input signal.
If input signal is missing, the motor moves the stem upwards if jumper J4 is on "direct action" position, or downwards if jumper J4 is on "reverse action".

## Self-adaption stroke

When the unit is powered on at the first time, it is necessary to do a cycle to adapt the motor to the real stroke. To do so the motor must be mounted on the valve and it must be powered on. To begin the cycle take away the cover, push the key (fig. 1) until the motor turns (red led flashing) then release it. On this phase the motor moves downwards in order the stem can couple automatically to the valve. When this phase has been completed the motor moves upwards to close the valve completely Igreen led flashing). The two end stops of the valve stroke have been then memorized and they will be used during regulation. If the motor is unmounted from the valve and then mounted again, the cycle for adapting the motor to the valve stroke must be repeated again.

| INPUT SIGNAL | J1 | J2 | J3 | J5 | J4 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $0 . .10 \mathrm{Vdc}$ | 0 |  | 0 | 0 |  |
| 0... 4 Vdc |  | 0 | 0 | 0 |  |
| $6 . .10 \mathrm{Vdc}$ |  |  | 0 | 0 |  |
| 2... 10 Vdc | 0 | 0 |  | 0 |  |
| 4... 20 mA | 0 | 0 | 0 | - |  |
| DIRECT ACTION |  |  |  |  | 0 |
| REVERSE ACTION |  |  |  |  |  |

[^0]
fig. 1

## Mounting

Control that the clips for automatic coupling is inserted on the seat fig. 2 / fig. 4 and the motor shaft is on the upper position.
Put the motor on the valve and screw the nut present on the valve body fig. 3.
Power on the motor (see paragraph regarding self-adaptation stroke) to allow automatic coupling on the valve stem. To take away the motor from the valve put the shaft on lower position, extract the clips, unscrew the fixing nut and remove the motor vertically.

fig. 3

## Manual override:

In order to open or close the valve manually, it is necessary to remove the plug fig. 4, insert a 3 mm hexagonal key. Push the hexagonal key downwards and turn clockwise to extract the motor shaft and counterclockwise to retract it. Such operation must done when power supply is off!

fig. 4
.

## Microswitch setup:

Put the motor on lower position. Position the two cams on snap-on point of microswitches (cams must be perpendicular to microswitches, fig. 5).
Put the motor on upper position. Position the cam 1 on the snap-on point of microswitch on top position (cam perpendicular to microswitch on top position, fig. 6), take care to not change the position of cam 2.

Note: microswitches are used only for end stroke detection. The microswitches can't be set on position different from end stroke.
